Results for www.datalifehealth...*

14s

Loading time: **Poor**

32%

Estimated visitor loss
(Due to speed)

4s

The following recommendations could reduce loading time by ~4 seconds.

Make your site faster

SPEED : **Poor**

Should fix

Consider fixing

Looks good

Reduce page weight

-  Compress images
[See how to optimize images so your page loads faster »](#)
-  Compress resources with GZIP
[See how to enable GZIP compression »](#)
-  Minify resources
[See how to minify HTML, CSS, and JavaScript »](#)
- Reduce number of requests
-  Leverage browser caching
[See how storing data in your local browsers can reduce network delays »](#)
-  Eliminate render-blocking JavaScript and CSS in above-the-fold content
[See how scripts may be slowing your site down »](#)
-  Avoid landing page redirects
- Make a quick first impression
-  Load visible content before CSS and JS files
-  Reduce server response time
[See how lowering server response time can improve your speed »](#)

Make your site easy to use

USABILITY : **Does not pass**

 Should fix

 Looks good

-  Avoid plugins
-  Configure the viewport
-  Size content to viewport
[See how to size content to the viewport »](#)
-  Size tap targets appropriately
[See how to size tap targets appropriately »](#)

Use legible font sizes

Make your page lightning fast with [AMP](#).

Once you've made these improvements, make sure to [retest your site](#) to see your new score.

<https://www.datalifehealth.com/>

Loading time: This is how long the primary content of your page takes to appear using Chrome on a Moto G4 device within a 3G network. Loading time can vary based on server location, device, browser, and third-party apps. If your site contains carousels, overlays, or interstitials, this may impact your loading time results. To test using different settings, visit webpagetest.org.

Estimated visitor loss: This is the probability of a user leaving this webpage as a result of waiting for more than three seconds for it to load. [Source](#)

Estimated time savings assumption is from the [PageSpeed Insights](#) "Bytes saved" figure and an internal Google study correlating reduction in page weight with the resulting impact on load time. Loading time savings vary depending on network, device, server, site design, and implementation.

This information is intended as a guideline only. Google does not guarantee improvements in your site's performance, which may vary based on location, device, browser, or other factors.
